AcSiP - An IoT Solution Company in the Internet of Things Industry. AcSiP, literally, represents our commitment to the development and service of Advanced Communication SiP technology (AcSiP = Advanced Communication System in Package).

ALLYSTAR - Allystar Technology (Shenzhen) Co. Ltd. is a spin-out from the GNSS chipsets designing department established in May 2013, subsidiary to China Electronics Corporation – the World's Top 500 enterprises.

Aliner - Aliner Industries is a leading RF connectivity solution developer, specializing in design and manufacture of high performing RF coaxial connectors, RF switch interface and cable assemblies, focusing on wireless applications, industrial grade solutions, automotive electronics and medical parts. In addition to a full series of RF connectors and customized items, Aliner's proprietary RF Switching Connectors provide excellent antenna switching solutions for wireless infrastructure.

Calian - Calian® is a developer, manufacturer, and provider of GNSS, Iridium antennas and accessories in support of our customers who are engaged in a broad range of satellite-based positioning, navigation, and data applications. Calian is known for its Accutenna® and VeraPhase® technology, as well as its recently introduced VeroStarTM and Helical innovations. These technologies have proven themselves to provide the highest performance antennas (low axial ratios, high multi-path signal rejection, tight PCV) in their size and weight, while setting lower economical price points. Calian's antennas are the antennas of choice for a wide variety of applications.

Cavli Wireless - Cavli was born when a group of industry professionals aligned on the simple idea that IoT should be made simple, seamless, and global. A collective pursuit to break the barriers of connectivity, enabling every object in the physical world to be managed from anywhere, is now an organization spread over multiple geographies solving the puzzle that is cellular IoT.

Coilcraft - Coilcraft chip inductors, power magnetics, EMI filters, wideband transformers.

Ezurio - Laird Connectivity is now Ezurio. Ezurio offer certified RF modules that enable secure, reliable wireless connectivity in the harshest RF environments in medical, industrial, and commercial applications. Solutions include Wi-Fi, Bluetooth, BLE, LoRa, Zigbee, 802.15.4, as well as combination modules.

HandyWave - HandyWave is a market leader in wireless RS232 cable replacement solutions, providing reliable and secure cable free communications for serial equipment using and expanding on the Bluetooth communication protocol. Typical applications include Point of Sale, PLC's, data loggers, traffic light and LED signs. Any device that has a serial port can use the HandyWave range as a suitable communication cable replacement. Products include the HPS-200, HPS-120 and HPU-120 radio modems.

IQRF ® – IQRF ® is a wireless Mesh technology in sub-GHz ISM radio bands. It requires no infrastructure by external providers, no license and no carrier fees.The functionality of transceivers is completely generic,depending on uploaded software – either a ready-to-use but extendable network plug-in or a user application written in C language.

LabSat - LabSat GPS & multi-GNSS simulators are designed and manufactured by RACELOGIC Ltd., experts in the field of GPS testing and data logging. These small, light-weight and battery powered GPS & multi-GNSS simulators allow you to quickly gather detailed, real world satellite data and replay these signals allowing realistic and repeatable testing to be carried out under controlled conditions. The LabSat3 is fully standalone and available in single, dual or triple constellation variants with replay only or record and replay functionality.

MARUWA - Maruwa integrate the ceramic material technology and manufacturing technology with the accumulation or a part installation technology to produce RF components or devices such as EMI filters, magnetic sheets, inductors, and EMC components (surge, noise suppression parts). Maruwa are establishing a global mass-production for various products including magnetic sheets and inductors.

MeiG - MeiG Smart Technology Co., Ltd. (Stock Code: 002881) was established in 2007, headquartered in Shenzhen, Guangdong Province. Based on advanced 4 G / 5 G wireless communication technology and IoT industry.

Nordic Semiconductor - Nordic Semiconductor is the world leading manufacturer of high quality, easy to use, reliable and cost effective ultra low power (ULP) wireless SoC's, their offerings include 2.4GHz RF, ANT™, Bluetooth® low energy and Sub 1 GHz RF IC's.

ON Semiconductor - ON Semiconductor manufactures the Axsem Sub 1 GHz transceiver IC and RF micro controllers, configurable from 27-1050 MHz for the AX5043 and 400-465/ 800-830 MHz for the AX5051, these products offer a unique combination of ultra-low power consumption for transmit and receive operation combined with highest sensitivity and high selectivity.

Radiometrix - Radiometrix design and manufacture high-quality Transmitters, Receivers, Transceivers & RF Modems. Available on all UHF and VHF ISM frequencies, Narrow Band and Wide Band FM options are available and in Single-channel and Multi-Channel operation.

RAKwireless Technology Limited - Is an industry-leading connectivity provider that builds IoT infrastructure using in-house developed solutions based on cutting-edge LPWA (Low Power Wide Area) technologies.

SEAL SQ - is one of the very few Semiconductors companies in the world capable of developing certified secure microcontrollers and implementing post-quantum cryptography. From Motorola, to Atmel Secure Microcontroller, Inside Secure and now within the WISeKey group, SEAL SQ teams have a long history of developing secure hardware, firmware and trust services for a wide variety of customers across multiple industries.

Seongji Industrial Co. - A Sigfox partner and specialized RF Company with a strong history over the past 20 years in both Mobile RF and Consumer Electronics. The core of the company being their ability to provide total RF solutions, from SAW filters through to short and long- range modules. The WSSFM10R family of modules connect you to the Sigfox network wherever you are in the world.

SignalQuest - SignalQuest precision microsensors design and manufacture electronic sensors for tilt angle, acceleration, shock, vibration and movement as well as application specific inertial measurement devices. Products are available in component, module and rugged packaged form factor to meet customer's specific requirements.

Taoglas - Taoglas antenna solutions manufacture a broad range of antennas for use in the ISM, Cellular, Short- range and satellite communication sectors. With a comprehensive range of external, embedded and base station antenna solutions for M2M applications such as telematics/ Automotive, Smart- Grid, Metering/ Telemetry, Home Automation and remote monitoring Taoglas have your design requirements covered.

Tibbo Technology - Tibbo Technology is a manufacturer of programmable embedded modules and controllers for the automation industry which include Serial- over- IP solutions, programmable IOT gateways, hardware, sensor monitoring and the Tibbo Project System (TPS). TPS makes use of custom modules (Tibbits) which are assembled onto a PCB of your choice and enclosed in a Tibbo Project Box (TPB) for a professional looking IOT hardware control system.

Trasna - is a global technology company headquartered in Ireland that specialises in semiconductor and mobile IoT solutions. With more than 200 clients operating in over 80 countries, Trasna connects people and devices at scale, enabling transformative experiences for mass IoT. The company combines expertise in semiconductors, secure data management, edge computing, AI, and blockchain to deliver integrated solutions – from chip design and SIM manufacturing to over-the-air subscription and device management. As an agile and technology-focused organisation, Trasna provides secure, efficient, and innovative solutions that connect devices from chip to cloud.

u-blox - is a leading supplier of positioning and wireless semiconductors and modules for the automotive, industrial and consumer markets. The broad portfolio of chips, modules and software solutions, uniquely positions u- blox to empower OEMs to develop innovative solutions for the Internet of Things, quickly and cost- effectively.
